CL	A1	M	S	•

1. A method for building a composite print job, comprising the steps of:

receiving first and second files in respective printer independent file formats;

printing said first and second files to a logical printing device in a printer dependent file format appropriate for a physical printing device; and

combining said first and second files as a composite print job, to prepare said first and second files for printing to said physical printing device.

- 2. The method of claim 1, wherein said logical printing device has the same attributes as said physical printing device.
- 3. The method of claim 2, further comprising printing said composite print job to said physical printing device.
- 4. The method of claim 1, further comprising printing said composite print job to said physical printing device.

5. An apparatus for building a composite print job for printing to a physical printing device defined by one or more attributes, the composite print job including at least a first file and a second file, said first and second files being in respective printer independent file formats, the composite print job building apparatus comprising:

a logical printing device defined by said one or more attributes;

a user interface adapted to print, in response to one or more file commands from a user, said first and second files to said logical printing device in a printer dependent file format adapted to said one or more attributes; and

a combining module for thereafter combining said first and second files as a composite print job, to prepare said first and second files for printing to said physical printing device.

6. A machine readable medium encoding a program of instructions adapted for execution by the machine, the program of instructions adapted to execute a method for building a composite print job, the method comprising the steps of:

receiving first and second files in respective printer independent file formats;

printing said first and second files to a logical printing device in a printer dependent file format appropriate for a physical printing device; and

combining said first and second files as a composite print job, to prepare said first and second files for printing to said physical printing device.

- 7. The medium of claim 6, wherein said logical printing device has the same attributes as said physical printing device.
- 8. The medium of claim 7, wherein the method further comprises printing said composite print job to said physical printing device.
- 9. The medium of claim 6, wherein the method further comprises printing said composite print job to said physical printing device.
